

"Save Environment - Save India"

* START TODAY - SAVE TOMORROW *

To know the ways to save environment we first need to know what is the environment. Environment: each and every thing that is surrounding us and is natural for example air, water, trees, nature and all the organisms present around us is environment. All the living organisms from microorganisms to humans and animals depend on the environment for their satisfaction of their needs.

As we know environment is very important for us because it supports the life system of every organism and also satisfies the basic and important needs of every organism in the world. If there is no environment there is no living life on this world. So we have to protect and save the environment for the future generation and also for the existence of life on our mother planet earth. Saving the environment means protecting the environment. How can we do so?...

• Here are few ways in which we can save our environment.

1. Reduce, reuse and recycle: which means reduce the waste by recycling or reusing them for other purposes. For Example: - If you use a paper, don't throw the paper after the use please give it to recycle so that you can use it again which comes under reuse.
2. Conserve water: This is the most important thing to do. If there is no water there is no life. As the environment is important for us, the water are also very important because environment also needs water. There are many ways to preserve water. Few ways are listed below.
 - Reduce the usage of water. (don't waste them)
 - Rain water harvesting
 - Mop the floor in your houses don't wash it

- Don't keep water stagnated · which is not again used (becomes useless).
- Don't pollute the water, and don't stagnate the water.

Prevent deforestation:- (Deforestation is the main problem in this world and in our country India · we can prevent it by not cutting the trees and by planting trees everywhere · Save the trees - save the life , a plant a day keeps the floods away.

Educate:- educate the people about the environment to preserve the environment and also to educate the people what will happen if there is no environment.

Save electricity · these days everything from a torch to a ~~is~~ used with electricity · we use more electricity.

So these are the few ways for protecting the environment.

Environment in India - India is a country which has vast types of vegetation.

India has a very good environment which is essential and best climatic conditions for plants and other organisms to grow. It has a perfect soil and best temperature. India has some of the world's & bio diverse eco-zones - deserts, mountains, highlands and tropical and temperate forests, swamplands, plains, grasslands, areas surrounding rivers and island archipelago. But we the people in India are polluting the natural resources and the environment. This is because of over population in India. Air pollution in India is a serious health issue. These days India is facing many problems on environment. Few problems faced by India are listed below.

- Air pollution
- Pollution management or waste management (Poor)
- Growing water scarcity.

- Biodiversity loss
- Falling ground water tables
- water pollution
- Land pollution
- No preservation of forest.

These are the reasons the India is loosing its purity of environment. India have so much of pollution. 51% of pollution is caused by the industries, 27% of vehicles, 17% by crop burning and 5% by diwali crackers. For that all of us should protect our mother India, as a citizen of our country. we also have many other problem other than environment. Few problems that should be reduced in India to make our India greater are :-

- Unemployment :- This is the reason our India is lacking in technology and money. There are many illiterates or uneducated people in our country its our duty to make sure that all the citizens of India get the best education and also the employment. For this the government should make sure that every house should be educated and should be aware of every thing.

- Poor policing :- In our country the police and cops are not honest in their duty. to make sure that all the citizens of India gets the best education and also the employment. For this, the government should make sure that every house should be educated and should be aware of every thing. These days the police takes bribe or money from a person to avoid being him/her punished for the mistake they have done. The police are also not very strict.
- Take news menace :- There are many fake news spread in our country many of us will be confused with the reality.

- Pending Justice :- In our country India, the people mostly are preferring or giving more Importance for money than the people. So they are lacking

in giving or doing justice for the people. That is nothing done in the courts where they take the corruption or bringing the money for their use but not doing the justice for the people.

- We the citizens of India should be united together. United means not only living together but also practicing justice. We have to do justice for just or make a path for only to get good things done, the government should take a strict action against the person who had done the unjust to someone or someone.
- To develop our country we should be in a unity and save our environment because our future depends on the environment.

These ways are to make India great = listed below.

- The government should make sure that everyone in India are well educated.
- The government should be very strict against the unjust done
- The government should make sure that the forests or trees should not be cut if they do so the one who cut the tree should grow the equal number of trees again.
- The government should check the unemployment and make sure to give them a job to live.

- To reduce the poor in our country the government should provide money to live in a house.

- The government should make sure the roads are clean and healthy and prevent road pollution.

- It should also keep a strict rule again burning of crackers

- The government should make sure that the farmers get good amount of the money depending on their crop produced.

* So, these are the few ways to make India better.

So I conclude by saying or requesting everyone to save the beauty of the nature and of our India. As we depend on the environment for everything ~~we~~ also when we die we will be mixed up with the soil which is environment.

So please save the environment & protect India.

• The Earth provides enough to satisfy every mans need but not every mans deed.

• If you cant clean your surroundings then dont make it dirty.

• Its our duty to save environments beauty.

• Only when the last tree has died, the last river has been polluted and the last fish is caught we will realize that we cannot eat money.

Thank you
&
Have a nice
day.
