air pollution, poor management of waste, growing water scarcity, falling ground water tables, water pollution, preservation of forests, biodiversity loss, and land/soil degradation are some of the major environmental issues India faces today.

India is known as the country of festivals, multicultures, languages etc. But it is also known as the land of pollution and the main hub of this country, Delhi is all 89% already polluted. If it continues like this, India will become polluted and uninhabitable by the year 2050.

According to TERI (an

company) India is the 5th most polluted country in the world. India is faced with many environmental problems like deforestation, Global warming, High carbon level etc. It is the responsibility of us Indians to make India a pollution free country. This is very difficult task. But if each Indian follows a few simple steps, this task can be fulfilled.

air pollution, poor management of water, growing water scarcity, falling ground water tables, urban pollution, preservation of forests, biodiversity loss, and land/soil degradation are some of the major environmental issues India faces today.

India is known as the country of miracles, multinationals, language is etc. But it is also known as the land of pollution and

The main hub of this country, still is still 91% already polluted.

If it continues like this, India will become polluted and unsustainable by the year 2050.

According to TDPA (a survey

company) India is the 5th most polluted country in the world.

India is faced with many environmental problems. The degradation

of forest covering, high carbon level etc. It is the responsibility

of us Indians to make India a pollution free country. This is

very difficult task. But if each Indian follows a few simple

steps, this task can be be justified.

The health of the people would ~~improve~~ ^{degrade}. Due to pollution and degradation, the health of many people is poor. Improving the environment would certainly improve the health of people. Most noteworthy, saving environment would reduce many diseases. Some of the ways to decrease environmental pollution are:

- i) Reduce the number of trips you take in your car.
- ii) Reduce or eliminate the fireplace and wood stove use.
- iii) Avoid burning leaves, trash and other materials.
- iv) Avoid using gas powered lawn and garden equipment.
- v) Recycle and reuse to stop pollution. Follow the 3Rs.
- vi) Avoid use of chemicals in farming.
- vii) Reduce waste...
- viii) Buy organic produce...
- ix) Increase of toxic chemicals properly...
- x) Shop with water pollution in mind....

the health of the people and the environment. The health of the people and the environment would directly impact the health of people. Most importantly, saving environment would reduce many diseases. Some of the ways to decrease environment is pollution are:

- 1) Reduce the number of bags you take in your car.
- 2) Reduce or eliminate the paper and avoid those who should be using them, such as other materials.
- 3) Avoid using gas-powered lawn and garden equipment.
- 4) Recycle and reuse the old pollution. Follow the 3R's.
- 5) Avoid use of chemicals in gardening.
- 6) Reduce waste...
- 7) Buy organic products...
- 8) Reduce of toxic chemicals properly...
- 9) Always wash with pollution in mind...
